Fasla | Pakistan market comparison

Board and entrance-exam audiences

Segment	Size (#)	Spending Power (PKR/mo)	Pain Evidence (stat + source)	Growth (%)	Best Channel + Est. CAC (PKR)	Willingness to Pay (PKR)
Board exam students	8,972,200 estimated secondary/intermediate enrolments, 2024-25; 7,050,300 in 2022-23. Educational-level proxy, not a deduplicated board/Cambridge candidate count. [1]	No Pakistan-specific data found for segment pocket money/income. Household proxy: 82,179 national; 96,767 urban, 2024-25. Not student disposable income. [2]	Phone use and academic disruption: r = 0.62; heavier-user disruption effect d = 0.83. Sample: 100 schoolgirls, Peshawar, 2025. Self-reported, non-causal, not national prevalence. [3]	+27.3%, calculated: 2022-23 to estimated 2024-25 enrolment. Tuition-paying subset growth not measured. [1]	Tuition-centre demos and teacher referrals (recommended). Segment CAC unavailable. Paid-ad model: 1,115-2,230 media-only CAC. Analyst estimate, 2026: 111.48 CPL [4] / assumed 5-10% purchase conversion. Excludes labour/creative costs.	Advertised tuition: 8,500/O-Level subject/month; 10,500/A-Level, accessed 2026. [5] Actual historical extra-coaching spend: 3,756 O-Level vs 1,725 Matric/month in a selected sample, 2015. [6] No blocker WTP data.
Entrance-test aspirants MDCAT / ECAT / NTS	138,158 MDCAT registrations, 2026, including overseas candidates. [7] Subset only; no deduplicated combined-market count found.	No Pakistan-specific data found for segment average. National household-income proxy: 82,179/month, 2024-25; not aspirants' own income. [2]	No Pakistan-specific data found isolating entrance-test aspirants. Adjacent evidence: 60% of 702 adolescent students screened positive for smartphone addiction, Islamabad/Rawalpindi, 2017-18; published 2020. [8]	MDCAT registrations -17.6%: 167,744 in 2024 to 138,158 in 2026, calculated. Both include overseas registrations. [9, 7] Combined-market trend unknown.	Preparation academies and exam-prep communities (recommended). No measured segment CAC. Same adjacent education-ad model: 1,115-2,230 media-only CAC; analyst estimate, 2026, using 111.48 CPL and assumed 5-10% conversion. [4]	Advertised 2026 MDCAT batch: 10,000. [10] Preparation book: 5,000, accessed 2026. [11] Offered prices, not verified spending averages. No blocker WTP data.

Reading the table: bracketed numbers refer to the source register. Proxies, offered prices and analyst CAC assumptions are not measured segment outcomes. All monetary figures are PKR.

Pakistan market comparison

Competitive exams and parent buyers

Segment	Size (#)	Spending Power (PKR/mo)	Pain Evidence (stat + source)	Growth (%)	Best Channel + Est. CAC (PKR)	Willingness to Pay (PKR)
Competitive-exam candidates CSS / PMS	64,081 CSS screening applicants, 2025; 12,792 appeared in written exams. [12] No deduplicated CSS/PMS /university-test total found. University tests overlap the preceding segment.	No Pakistan-specific data found for candidate income/pocket money. National household-income proxy: 82,179/month, 2024-25; not candidate earnings. [2]	No Pakistan-specific data found quantifying distraction specifically among CSS/PMS candidates. Exam failure rates do not establish distraction as their cause.	CSS screening applications +8.4%: 59,133 (2023) to 64,081 (2025). Written attendance -1.7%: 13,008 to 12,792. Calculated; interest and attendance diverge. [12]	CSS academies, reading rooms and prep communities (recommended). No measured segment CAC. Adjacent education-ad model: 1,115-2,230 media-only CAC; analyst estimate, 2026, using 111.48 CPL / assumed 5-10% conversion. [4]	Advertised CSS course packages: 90,000-120,000 over 4.5 months, NOA prospectus, 2025. [13] Package-price evidence, not average actual spend. No blocker WTP data.
Parents of teenagers	No Pakistan-specific data found for unique parent buyers in reviewed published tables. 8,972,200 estimated secondary/intermediate enrolments, 2024-25, count students, not parents; overlaps board students. [1]	Urban household mean: 96,767/month; urban highest consumption quintile: 146,920, 2024-25. Household proxies only; no teen-parent-specific mean found. [2]	Child-side evidence: 60% of 702 adolescent students screened positive for smartphone addiction, Islamabad/Rawalpindi, 2017-18; published 2020. [8] Does not measure parental concern or purchase intent.	No Pakistan-specific data found for parent-segment growth over the requested period. School enrolment +27.3%, 2022-23 to estimated 2024-25, is not unique-parent growth. [1]	School/tuition-centre parent groups and demos (recommended). No measured CAC. Proposed commission: 500-800 per completed sale; analyst pilot assumption, 2026. Not a benchmark or fully loaded CAC; excludes staff, demos and samples.	Advertised school-age tuition: 8,500-10,500 per subject/month, accessed 2026. [5] Adjacent paid offering; no segment-average screen-control spending or blocker WTP data.

Reading the table: bracketed numbers refer to the source register. Proxies, offered prices and analyst CAC assumptions are not measured segment outcomes. All monetary figures are PKR.

Pakistan market comparison

Professionals and freelancers

Segment	Size (#)	Spending Power (PKR/mo)	Pain Evidence (stat + source)	Growth (%)	Best Channel + Est. CAC (PKR)	Willingness to Pay (PKR)
Young corporate / remote professionals Lahore / Karachi / Islamabad	No Pakistan-specific data found for exact age/city/work-arrangement intersection. Broad context: about 4,709,200 professionals nationally = 77.2m employed x 6.1%, 2024-25. Includes other ages and places. [14]	62,822/month national mean wage for salaried professionals, 2024-25. Occupational proxy, not the exact urban-young cohort. [14]	FOMO correlated with non-work internet use: r = 0.44, p < 0.01; 238 employees in Islamabad/Rawalpindi, 2024. Documents workplace distraction, not lost hours or national prevalence. [15]	No Pakistan-specific data found for exact cohort over requested period. Longer-window wage proxy: +50.2% nominal, 41,815 (2020-21) to 62,822 (2024-25). Outside requested window; not inflation-adjusted. [14]	Employer teams and coworking communities (recommended). No measured segment CAC. Proposed referral commission: 500-800/sale; analyst pilot assumption, 2026; excludes staff, demos and samples.	2026 yearly productivity planner advertised at 3,550. [16] Local price reference only; no evidence of this cohort's purchases or blocker WTP.
Content creators / freelancers Reporting lost work to social media	About 2,370,000 freelancers, industry estimate, 2024. [18] No count found for distraction-affected subset, or a deduplicated creator/freelancer total.	34.69% earn below 15,000/month. Median falls in 30,000-50,000 band, calculated from cumulative brackets. Representative mean not found. PAFLA/ADB, 2024. [17]	No Pakistan-specific data found quantifying social-media distraction or work hours lost specifically in this segment. Internet-outage losses measure a different problem.	Tech-freelancer receipts +51%, corresponding July-March periods FY2025 to FY2026. Revenue proxy, not headcount/spending. Comparable multi-year series for exact segment not found. [19]	PAFLA and coworking communities (recommended); government centres host about 4,600 freelancers, 2026. [19] No measured CAC. Proposed 500-800/sale referral commission; analyst pilot assumption, 2026, excluding other acquisition costs.	2026 productivity planner offered at 3,550. [16] No Pakistan-specific data found on actual segment spending on planners/productivity tools or blocker WTP.

Reading the table: bracketed numbers refer to the source register. Proxies, offered prices and analyst CAC assumptions are not measured segment outcomes. All monetary figures are PKR.

Pakistan market comparison

Seasonal demand and launch recommendation

Segment	Size (#)	Spending Power (PKR/mo)	Pain Evidence (stat + source)	Growth (%)	Best Channel + Est. CAC (PKR)	Willingness to Pay (PKR)
Ramadan / Itikaf Digital-detox seekers	No Pakistan-specific data found for national detox buyers or Itikaf participants. Local audience: about 1,000 Faisal Mosque participants, 2025; not a national estimate. [20]	No Pakistan-specific data found for segment income. National household-income proxy: 82,179/month, 2024-25. [2]	78% planned to reduce digital-media consumption during Ramadan, Ipsos Pakistan, 2026. Stated detox intent, not measured impairment or buying intent. [21]	No Pakistan-specific data found for comparable segment -size/spending growth. In 2026, 65% planned to cut Ramadan shopping due to inflation; intention, not historical growth. [21]	Islamic learning communities and Ramadan-planner sellers (recommended). No measured CAC. Proposed seller referral commission: 500/sale; analyst pilot assumption, 2026, excluding other acquisition costs.	Ramadan Planner 2026 advertised at 1,550. [22] Relevant planning-product price, not verified average spend. No Pakistan-specific blocker WTP data.

Reading the table: bracketed numbers refer to the source register. Proxies, offered prices and analyst CAC assumptions are not measured segment outcomes. All monetary figures are PKR.

Recommended first segment

Launch first to parent-funded board-exam students already attending paid tuition, through their tuition centres. The clearest affordability anchor is PKR 8,500 per subject per month advertised by SJ Academy (accessed 2026) [5], alongside documented academic disruption [3] and 27.3% expansion in the broader enrolment pool [1]. Start at PKR 3,000, the lower end of your supplied range. This is a provisional pick: paid orders must validate blocker willingness to pay and acquisition cost; available evidence does not prove every launch criterion for any segment.
